

Save loons!

Fish lead-free.

What's the problem with lead?

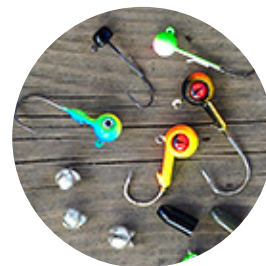

Lead is toxic to wildlife. Even in small amounts, it is lethal to loons, eagles, and trumpeter swans. Lead is responsible for up to 25% of adult loon deaths nationwide.

Loons ingest lead tackle when they eat a fish with tackle attached to or inside it or when they pick up lost tackle rather than pebbles to aid digestion.

Lead is toxic to people, both when handling lead products and in the manufacturing process.

Lead-free alternatives

- Tungsten
- Bismuth
- Steel
- Tin

Don't throw lead in the trash!
Bring it to your county household hazardous waste facility.
